Problem 1

In this exercise you're going to create a page called "index.html" that looks as close as possible to the attached image "*Screenshots.png*" (you don't have to match the exact colors or fonts. Everything else, however, should be as close as possible).

Here are a few tips:

- The page is composed of 5 parts.
- The image of the first part fills the 100% the height of its container.
- The other images have a height of 400px.
- The first, third, and fifth parts have their background fixed when scrolling up and down and their images are "*Bliss-1.jpg*", "*Bliss-2.jpg*", and "*Bliss-3.jpg*" respectively (check the attached "*Ex1.gif*" image).
- The first, third, and fifth parts have their text center-aligned and have a top padding of 50px and a right padding of 80px and their content is rendered in uppercase when the page is viewed.
- The second part is composed of a heading 2 followed by this piece of text:
  > *The Department of Computer Science at the American University of Beirut prepares students for advanced studies and professional careers in the dynamically changing world of computing and information technology. Our programs combine the theoretical foundations of computing with the practical knowledge of software development vital to industry and provide a broad and integrated curriculum.*
- The fourth part is composed of a heading 2 followed by this piece of text:
  > *Daniel Bliss Hall was the first building in Beirut to use reinforced concrete. Bliss Hall was renovated in 1993.*
